

RETAIL (E-COMMERCE) SALES ANALYSIS

Presented By: **Zahra Abdullayeva**

Project Overview

- Analyze e-commerce sales data using SQL
- Explore customer and product behavior
- Identify revenue trends and key insights
- Visualize results using Excel and PowerPoint

We will visualize the following topics:

01

Monthly and Yearly Sales Trend

02

Top 5 Products and Customers

03

Product Return Rate

04

Distribution of Payment Methods

Dataset Overview

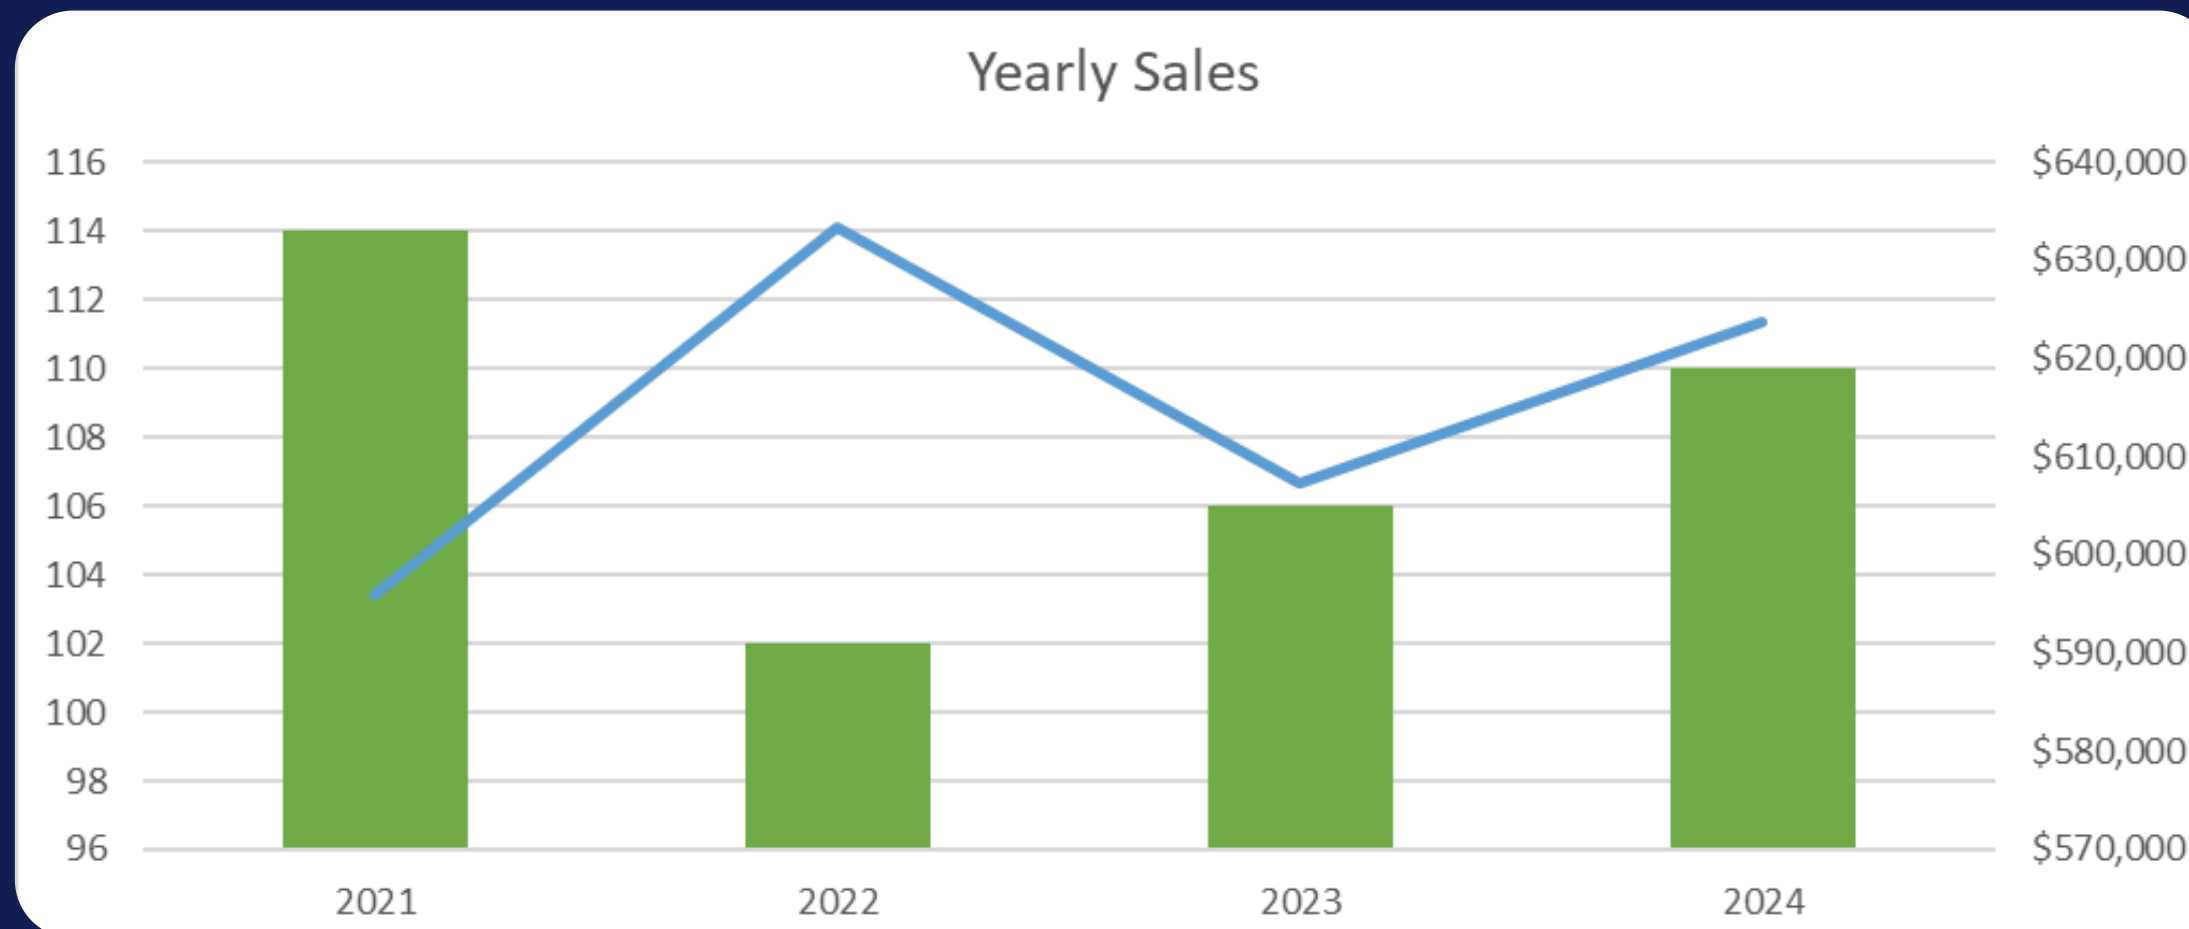

Tables used:

- CUSTOMERS
- PRODUCTS
- ORDERS
- ORDER DETAILS
- RETURNS

Yearly Sales and Order Trends (2021–2024)

Blue line: Number of Orders

Green bars: Total Sales Revenue

01

Order volume peaked in 2022, while revenue was higher in 2021 and 2024.

02

This suggests that average order value (AOV) was higher in 2021 and 2024 compared to 2022.

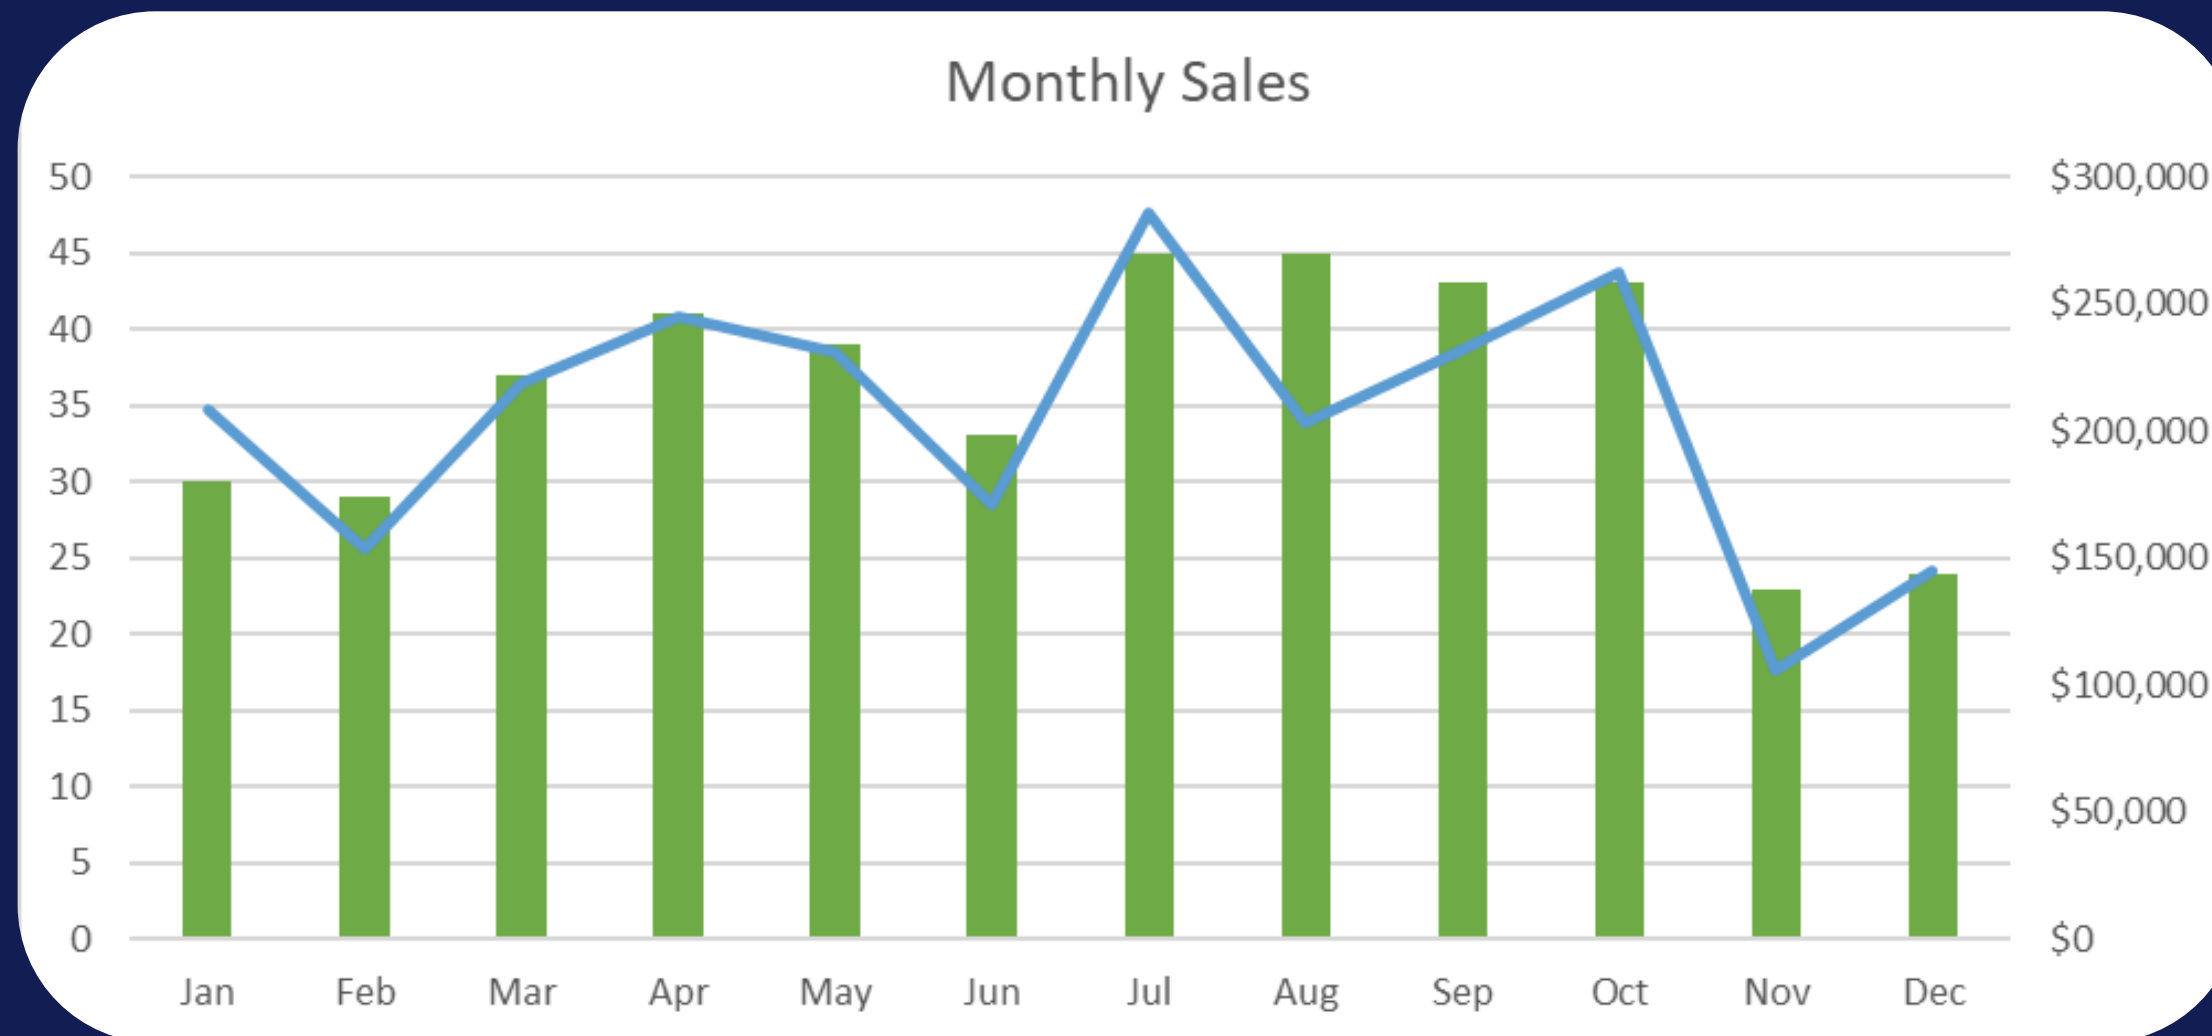

03

The decline in 2023 indicates a potential slowdown in customer demand or pricing changes.

Monthly Sales Performance

Blue line: Number of Orders

Green bars: Total Sales Revenue

01

July, August and September are the months with the highest sales and orders.

02

November and December have the lowest sales and orders

03

Sales and orders usually move in the same direction.

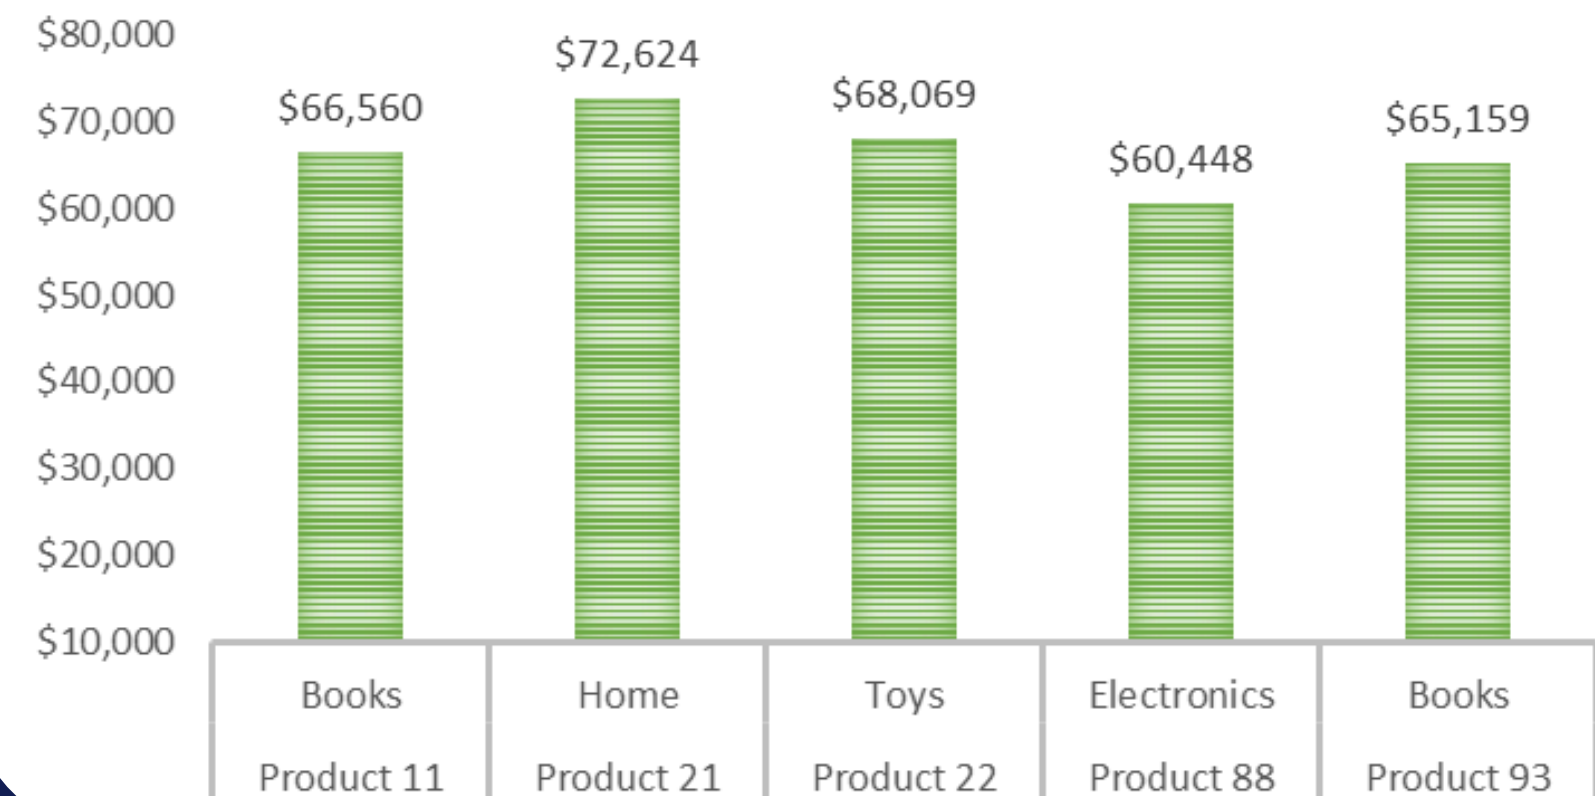

Top 5 Products and Customers

Top 5 Customers by Number of Orders

TOP 5 PRODUCTS BY TOTAL SALES REVENUE

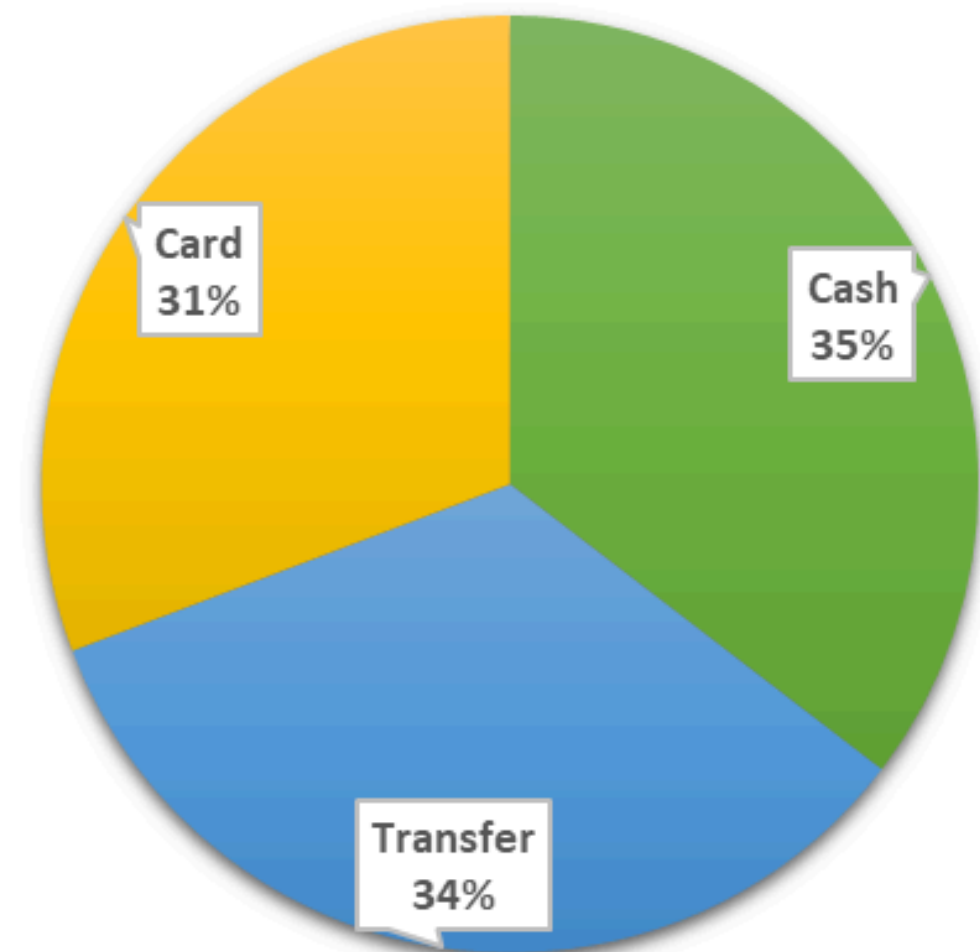

- A small group of customers generates the highest number of orders.
- Home and Toys categories are among the top revenue drivers.

Payment Methods Share

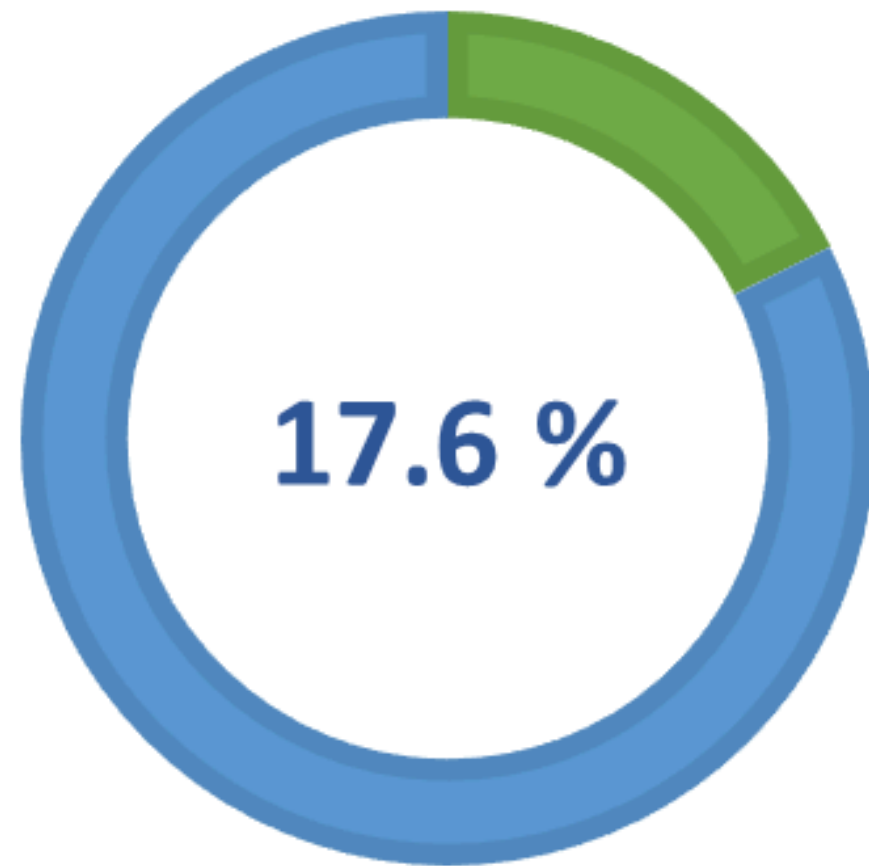

- **Cash is the most used payment method (35%)**
- **Bank transfer accounts for 34% of payments**
- **Card payments represent 31% of total orders**

Payment Methods Share (%)

RETURN PERCENTAGE

The overall return rate is 17.6%.

Return Percentage

● Conclusion:

- Mid-year months show the highest sales.
- Top customers and products drive most revenue.
- Return rate is 17.6%.
- Payment methods are evenly distributed.

● Recommendations:

- Boost marketing in low months
- Target top customers
- Reduce returns
- Prepare for peak season
